Note from the President and CEO

The challenges and opportunities facing North American meat producers, packers, and processors today and in the years to come require ambition and investment at greater scale than ever before.

We at the North American Meat Institute firmly believe that we must take on a leadership role in facing these challenges and opportunities, and we equally know that no association, company, or farmer can succeed in this effort alone. In fact, a key component of our commitment to leadership is actually a commitment to fostering common cause and mutually-beneficial action.

We could not be more proud of our members' work to develop and embrace the Protein PACT vision. They have combined forces wholeheartedly to drive continuous improvement that will be transformative, not just for our industry and our colleagues, but also for the communities we call home and the families we strive to nourish every day.

The report that follows marks a momentous milestone in this journey for continuous improvement. With it, we signal that our industry's culture is transparent and data-driven.

Meat Institute members have never before had the opportunity to share the breadth and depth of information reflected here. They do so voluntarily, in the spirit of publicly verifying progress toward common goals and driving industry-wide implementation of best practices.

As the saying goes, we cannot manage what we do not measure. It is an honor to share this first-ever dataset

measuring the practices and commitments of America's leading meat companies across the five focus areas of our comprehensive sustainability framework.

We thank every company that has contributed data and every one of the 500,000+ dedicated people working to nourish American families while keeping our farm economy running. We also thank Protein PACT sponsors, endorsers, and partners for strengthening this effort.

Together, we have the ambition and are making the investments this moment requires. And I know we will deliver.

Julie Chura Potts

Julie Anna Potts, President and CEO

What we will achieve

To verify progress along the way to our vision for 2030, NAMI has committed that:

By 2025:

- 100% of NAMI members who handle animals will pass third-party animal transport and handling audits and all members will require all suppliers to implement mandatory employee training and follow species-specific standards for animal care.
- Working with the U.S. Department of Agriculture and Feeding America, we will measure and help fill the protein gap to ensure families in need have enough high-quality protein.

By 2030:

- 100% of NAMI members will have delivered an approved Science Based Target to reduce emissions in line with the Paris Climate Agreement goals.
- We will further reduce workplace injuries by 50% (2019 baseline), on top of the 75% reduction achieved from 1999 to 2019.
- 100% of NAMI members will be reporting on all metrics.

Animal Welfare Provide the most humane care and raise healthy animals Optimize contributions Support a to healthy land. diverse workforce air and water and ensure safe Health Swellness workplaces Provide wide variety of high-quality Produce safe protein for food without balanced diets exception

Protein Pact Bold goals

Bold goals reflect the industry's values

and inspire members to continuously improve and increase consumer trust through the Protein PACT.

The bold goals are aspirational, forward-looking, and intended to encompass the entire supply chain.

Environment & the planet

Lead the global animal protein industry by establishing a transparent blueprint for minimizing environmental impacts on land, air, and water

Animal welfare

Design and universally adhere to a globally accepted and outcome-based standard for animal welfare at all points in the supply chain

Labor & human rights

Be an employer of choice though an unyielding commitment to diversity, inclusion, employee occupational health and safety, and human rights

Food safety

The meat and poultry supply chain produces safe meat products without exception

Health & wellness

Animal protein is recognized as the leading source of high-quality protein, and an essential contributor to nutrition, health and wellness

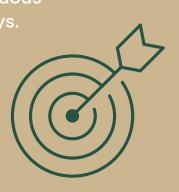

Pioneering the first sector-wide dataset and setting transparent baselines

As we committed when the Protein PACT launched in July 2021, companies representing an estimated 90% (by volume) of meat sold in the United States are already participating in data collection in year one.

We believe companies of all sizes have a role to play in achieving progress toward global goals, and we are committed to helping even the smallest members start and measure their continuous improvement journeys.

Target

By 2030, 100% of NAMI members will be reporting on all metrics.

Achievement snapshot:

*Note that reporting companies were not required to submit data for all metrics, and some metrics only apply to certain companies (e.g., those that handle live animals). The figures reported below specify the data pool for each metric or indicator.

86%
of packer/processor
members on the NAMI
Executive Board have
reported
data
30/35

100% of Board
officers 5/5
69% of full NAMI
Board reported data,
committed to report,
or are sponsoring
48/70

Number of employees in covered establishments was not recorded. However, given the 100% participation of large member companies, data include establishments employing a very large majority of the total North American workforce packing or processing meat.

Optimizing contributions to healthy land, air, and water

Many meat companies and producers are setting targets to reduce emissions, reduce waste, protect natural resources, and more. Their circumstances significantly. The Meat framework will drive momentum, fill data gaps, and advance tools needed to produce the food Americans and families around the world need.

Target

By 2030, 100% of NAMI members will have an approved Science-Based with the Paris Climate Agreement

Achievement snapshot:

11 Meat Institute member companies have set or publicly committed to set a Science-Based Target, representing a significant portion of meat sold in the United States.

Tyson

Cargill

Have publicly committed to set SBT

81% of reporting establishments are covered by a company commitment to reduce GHG emissions

84% of reporting establishments are covered by a company commitment to

measure scope 1 and 2 emissions

81% of reporting establishments are covered by a company commitment to measure scope 3 emissions

Optimizing contributions to healthy land, air, and water

Additional indicators:

51% of reporting establishments have a **program to increase energy efficiency** and have an energy use intensity goal

- 51% are tracking progress
- 43% are delivering progress
- 37% publicly report progress

82% of reporting establishments are covered by a company commitment to minimize packaging waste

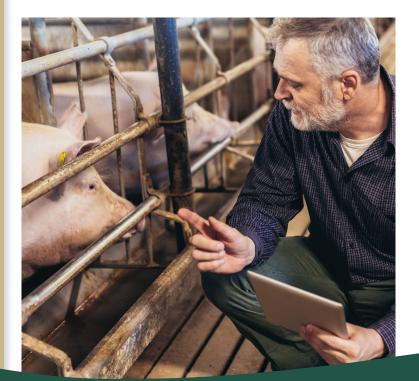

71% of reporting establishments are covered by a commitment to reduce food waste

49% of reporting establishments have a program to increase renewable energy use

- 46% are tracking progress
- 32% are delivering progress
- 38% publicly report progress

Land and water use:

36% of reporting establishments have a land use program that includes policies to mitigate impacts on natural resources (e.g., forests, wetlands, and grasslands) for all facility construction, renovation, and/or expansion.

25% of reporting establishments have a land use program that addresses land conversion and/or deforestation

83% of reporting establishments have established a water withdrawal program with goals by source that is tracking water use intensity and minimizing withdrawal from areas with water stress.

73% of reporting establishments have a water-shed-based risk assessment

Providing the best animal care and raising healthy animals

The high-quality, nutrient-dense meat we rely on for healthy diets and sustainable food systems can only come from healthy, well-cared for animals.

Target

By 2025, 100% of Meat Institute members who handle animals will pass third-party animal transport and handling audits, and 100% of members will require all suppliers to implement mandatory employee training and follow species-specific standards for animal care.

Achievement snapshot:

72% of reporting establishments that handle live animals have a comprehensive animal welfare program based on the Meat Institute's Animal Handling Guidelines

71% of reporting establishments that handle live animals pass third-party animal handling audits, at minimum annually

38.5% of reporting establishments that handle live animals require suppliers to implement **employee training** and **species-specific standards** for animal care

96% of reporting establishments that conduct further processing require suppliers to maintain a written animal welfare program based on NAMI Animal Handling Guidelines

70% of reporting establishments that handle live animals participate in country- and species-specific transportation programs

62% of reporting establishments (live animal and further processing) participate in species-specific stakeholder initiatives to improve animal well-being

Supporting a diverse workforce and ensuring safe workspaces

The 500,000+
dedicated people
who work in
America's meat
companies keep
nutrient-dense food
on our tables and
our farm economy
running. They are
our sector's greatest
asset.

Target

We will further reduce workplace injuries by 50% (2019 baseline), on top of the 75% reduction achieved from 1999 to 2019.

Achievement snapshot:

COVID-19 impact on TRIR data

According to the <u>U.S. Bureau of Labor Statistics</u>, the number of employer-reported respiratory illness cases in all industries increased nearly 4,000% in 2020, rising from 10,800 in 2019 to 428,700. The Meat Institute assesses that the 2020 change in TRIR is attributable to reported COVID cases, not to an increase in injuries. For information on comprehensive COVID-19 protections in the sector, please visit www.NAMICovidFacts.com.

Supporting a diverse workforce and ensuring safe workspaces

Supporting indicators

100% of reporting establishments have a written worker safety program in place

100% of reporting establishments have safety on-boarding and continuing safety training

99% of reporting establishments train employees in **hazard recognition** for their specific role

99% of reporting establishments have **safety committee** or team that meets regularly

94% of reporting establishments inspect all departments, lines, and areas for potential hazards at least monthly

85% of reporting establishments report **near-miss incidents** within 24 hours

97% of reporting establishments analyze injury data at least annually and use data to set company goals and objectives

61% of reporting establishments **conduct safety perception surveys** of employees regularly

Workplace diversity

57% of reporting establishments are covered by a **company mission statement** that addresses diversity, equity, and inclusion

91% of reporting establishments are covered by a company commitment to implement diversity goals in salaried workforce

- 87% are tracking progress
- 58% are delivering progress
- 26% report progress publicly

59% of reporting establishments are covered by a company commitment to **implement diversity goals in hourly workforce**

- 56% are tracking progress
- 45% are deliver progress
- 3% report progress publicly

41% of reporting establishments are covered by a company commitment to **implement retention rate goals** by demographic (gender, race, age, tenure, etc.)

- 34% are tracking progress
- 13% are delivering progress
- 5% report progress publicly

Producing safe food without exception

Food safety is our number one priority, and meat processing and packing are among the most regulated industries in the United States. U.S. Department of Agriculture inspectors are continuously present in meat packing plants and oversee compliance with a wide array of regulatory requirements.

While preventing foodborne illness requires appropriate safety measures at all steps in food's journey from the farm to the family dinner table, we implement the highest standards for food safety measures.

Food safety is not a target; it is our culture.

Achievement snapshot:

98% of reporting establishments have a multidisciplinary team that periodically reviews food safety programs and takes improvement action in response to available data.

99% of reporting establishments are covered by a company commitment to embed food safety into the company culture through communications and initiatives.

99% of reporting establishments conduct an accredited third-party food safety audit annually, at minimum.

72% of reporting establishments are covered by a company commitment to establish a continuous improvement goal on top of passing a third-party food safety audit.

Providing a wide variety of high-quality protein for balanced diets

According to the 2022
Power of Meat survey,
98% of American
households purchase
meat. 74% of Americans
consider themselves
"meat eaters" and 75%
agree meat belongs in a
healthy, balanced diet.
We are committed to
providing a wide range
of choices to fulfill
consumers' individual
and family needs.

Target

Working with the U.S. Department of Agriculture and Feeding America, we will measure and help fill the protein gap by 2025 to ensure families in need have enough high-quality protein.

Too many Americans suffer from hunger. According to Feeding America, meat is one of the top three most needed foods for food charities. Yet, meat represents just 1% of food distributed by food charities, in part due to limited capacity to limited infrastructure for cold storage, packing, and distribution.

The resulting "protein gap" worsens hunger and particularly impacts women, children, and older adults who have greater need for the nutrients, vitamins, and minerals best and sometimes only found naturally in animal-source foods.

Filling the "protein gap" is a top priority for the Meat Institute and its members, who have committed to act on a non-competitive basis to help end hunger in the United States by openly sharing information and advancing industry-wide implementation of best practices, like investing in protein pack rooms and refrigerated transportation."

Achievement snapshot:

78% of reporting companies make donations (cash or products) to food banks

71% of reporting companies make food security-related donations to other charities

The Meat Institute contributed to the October 2022 **White House Conference on Hunger, Nutrition, and Health,** including by convening a stakeholder listening session and submitting our commitment to the <u>CDC Foundation</u>.

Meat Institute members announced more than \$9 million in food security donations in 2022, including:

Cargill announced in August a new \$4.9 million donation to Feeding America, including to build and expand protein pack rooms.

JBS has donated more than \$2 million for improvements in cold storage and distribution, along with contributing to food safety training and safe meal preparation.

Tyson Foods donated \$2.5 million to Feeding America, allocating \$1 million to Equitable Food Access grants, and 2.5 million pounds of protein.

An annex containing further examples of Meat Institute member efforts to end hunger is available here.
