

## WORKER SAFETY

# Personal Protective Equipment

PPE is your last line of defense. Use it every shift.

**Improper or missing PPE is a leading cause of serious injury and death.**

Know the right PPE for your task and wear it correctly at all times.

01

## Know Your PPE

**Safety glasses, steel-toed shoes, hearing protection, gloves, aprons, N95s, hard hats.**

Understand which PPE is required for your specific job tasks before you start.

02

## Wear It Correctly

**PPE worn improperly offers little to no protection. Fit matters.**

If you are unsure how to wear your PPE correctly, ask your supervisor.

03

## Inspect Before Use

**Check your PPE at the start of every shift for cracks, tears, or damage.**

Damaged PPE must be replaced immediately. Do not use compromised equipment.

04

## Store and Maintain

**Clean and store PPE in designated areas after every use.**

Contact your supervisor to report missing or damaged PPE right away.

### PPE DAILY CHECKLIST

*Check your gear before each shift.*

- ☐ Safety glasses or goggles free of scratches and damage
- ☐ Steel-toed shoes in good condition, no exposed steel
- ☐ Hearing protection available and in good condition
- ☐ Correct gloves selected for the task (cut, heat, chemical)
- ☐ Apron or protective clothing is clean and undamaged
- ☐ N95 respirator available if required for your work area
- ☐ Hard hat inspected, no cracks or dents
- ☐ All PPE stored properly at end of shift
