

WORKER SAFETY

Slips, Trips, and Falls

The most common and preventable injuries on the floor.

Slips, trips, and falls are the number one cause of workplace injuries.

Good housekeeping, lighting, and behavior prevent most of these incidents.

01

Manage Wet Surfaces

Clean up spills immediately. Display wet floor signs as needed.

Report leaking valves and pipes. Remove snow and ice from outdoor paths.

02

Clear Aisles and Walkways

Keep all work areas, passageways, and storerooms clean and orderly.

Never string cords or hoses across aisles. Cover or mark all drain holes.

03

Ladder Safety

Inspect ladders before every use. Check rungs, boots, and lock bars.

Keep two feet on the ladder at all times. Do not use the top two rungs.

04

Lighting and Behavior

Turn on lights before entering any room. Keep all walkways well-lit.

Avoid rushing, phone use, or carrying materials that block your vision.

SLIPS, TRIPS, AND FALLS PREVENTION CHECK

Complete at the start of each shift.

- ☐ All spills cleaned up or marked with wet floor signs
- ☐ Aisles and passageways clear of cords, hoses, and debris
- ☐ Drain holes covered or marked with cones
- ☐ Adequate lighting in all walkways and work areas
- ☐ Ladders inspected before use; rungs and boots in good condition
- ☐ Items not stored on steps or stairways
- ☐ Floor mats flat, clean, and secured at edges
- ☐ No rushing or phone use while walking in work areas
